What are we learning this week? 1/4/19

It's fun,
it's cool,
it's awesome.
It's science!

Welcome to the start of a new week. This week is **Science Week in Reception** and we will be looking at a variety of science experiments based on space and through the picture book 'Goodnight Spaceman' by Michelle Robinson. On Monday we will be looking at a letter from Tim Peake the first British ESA astronaut and then designing rockets, making aliens as well as looking at Solar System and planet Earth.
We will be looking plants and whether they would survive on different planets as well as making rockets that work!

Later in the week we will be looking at the moon and stars. We will be carrying out gravity experiments, junk modelling rockets as well as writing letters home from space. If you would like to look at the stars and moon this week with your children we would love to see some pictures they might draw.

On Wednesday we have our Trip to Woodside Farm. We will be leaving school just after 9am on the day so it would be great if we are all in on time that morning. If the children are bringing a packed lunch from home please can you provide your child with two named drinks (no fizzy please). If the packed lunch is from home, please can it come in a named carrier bag with as much disposable packaging as possible. If the children could come on the day dressed in school uniform tops and joggers. Children should wear trainers for the trip. We will return to school ready for 3.15pm and the children can be collected as usual from outside their classrooms. Please provide your child with a raincoat for the trip. Thank you
